Creating account, repository on GitHub and Cloning repository in GitHub

a) Creating Account

Step 1: Search “**GitHub**” on Google chrome and go to official page of GitHub.

Step 2: Click on the Sign Up button to create an account.

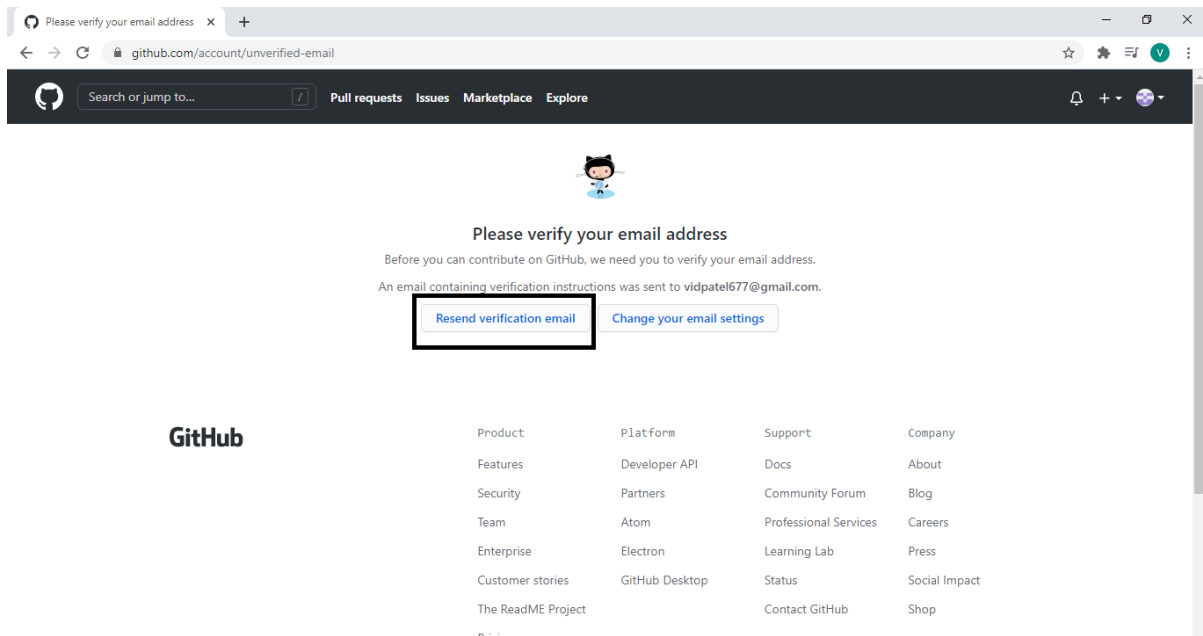

Step 3: After clicking on Sign Up button you will visit this page and fill the necessary detail.

A screenshot of the GitHub 'Create your account' page. The form includes fields for 'Username', 'Email address', and 'Password'. Below these are checkboxes for 'Email preferences' and 'Verify your account'. A CAPTCHA puzzle is present. At the bottom is a 'Create account' button. Annotations with arrows point to various parts of the form: 'Write Name or username' points to the Username field; 'Write Email Address' points to the Email address field; 'Write password' points to the Password field; 'Verify you Email Address' points to the 'Verify your account' checkbox; and 'Click on Create Account' points to the 'Create account' button. A small red error message is visible below the Password field: 'Make sure it's at least 10 characters. It must include at least 1 number and a lowercase letter. Learn more.'

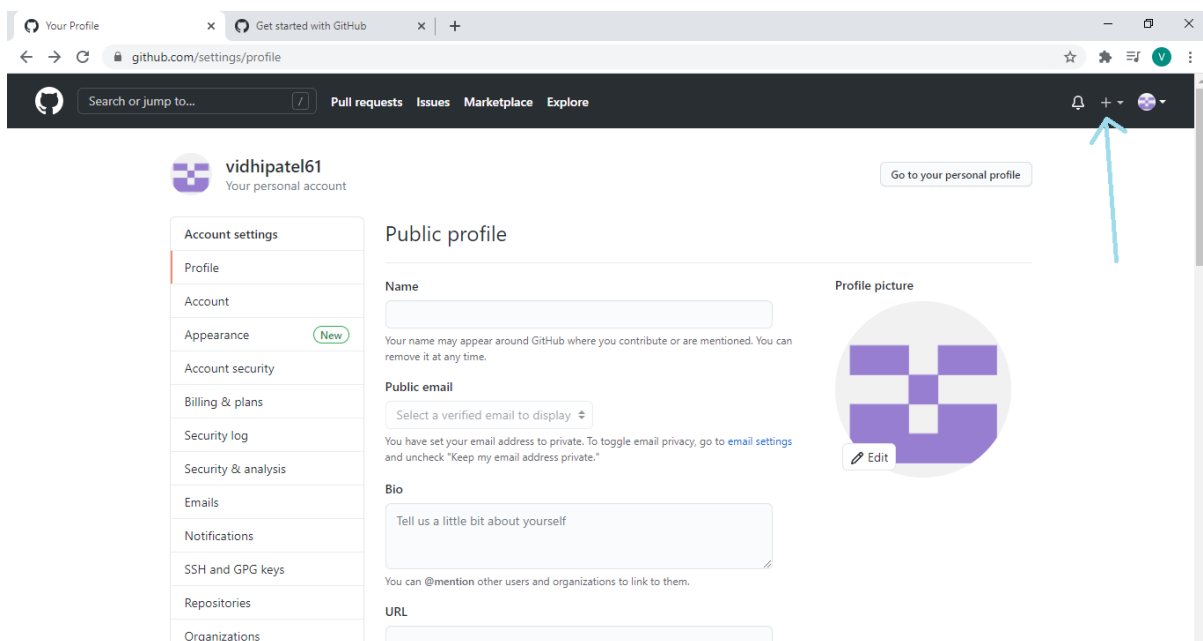

Step 4: You will visit this page and click on **“Resend on Verification Email”** to Verify you Email Address.

(You will receive an Email from GitHub to verify) Now your account is created.

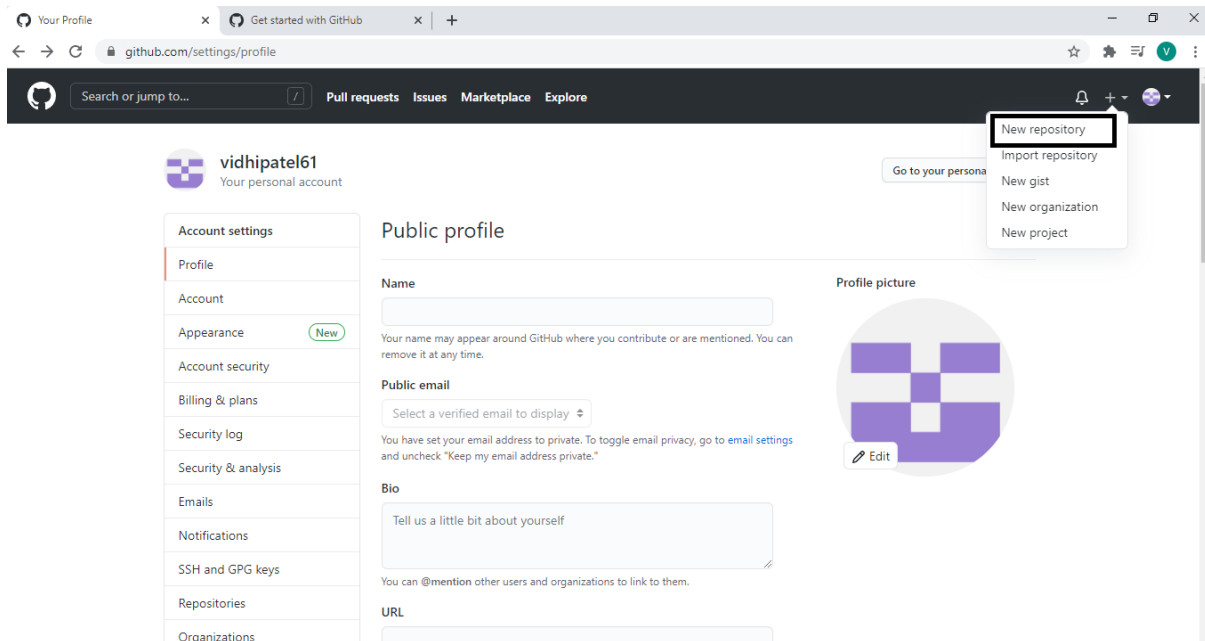

b) Creating Repository

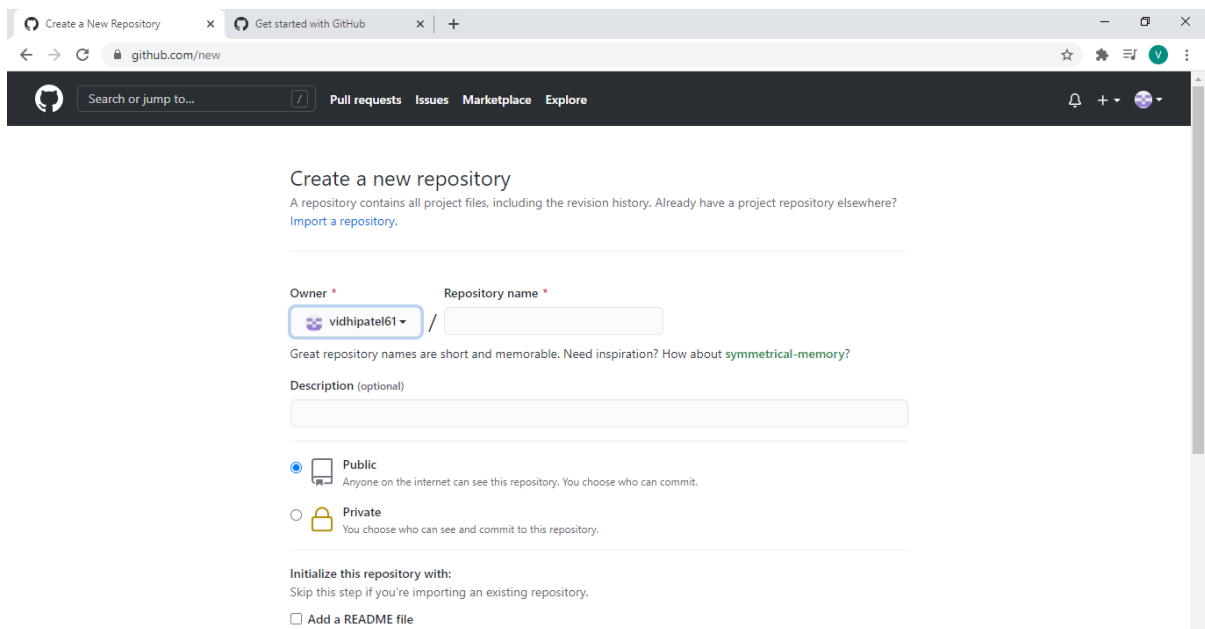

Step 1: To Create Repository click on the **+** Button.

Step 2: Click on **New Repository** to create.

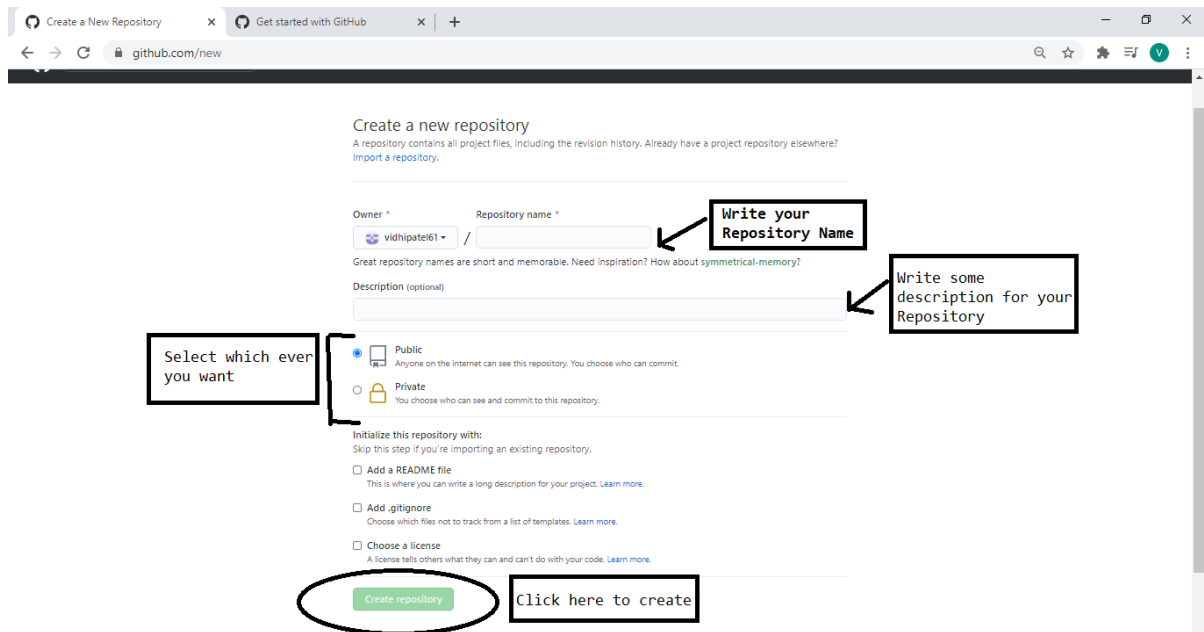

Step 3: You will visit this page to create a repository.

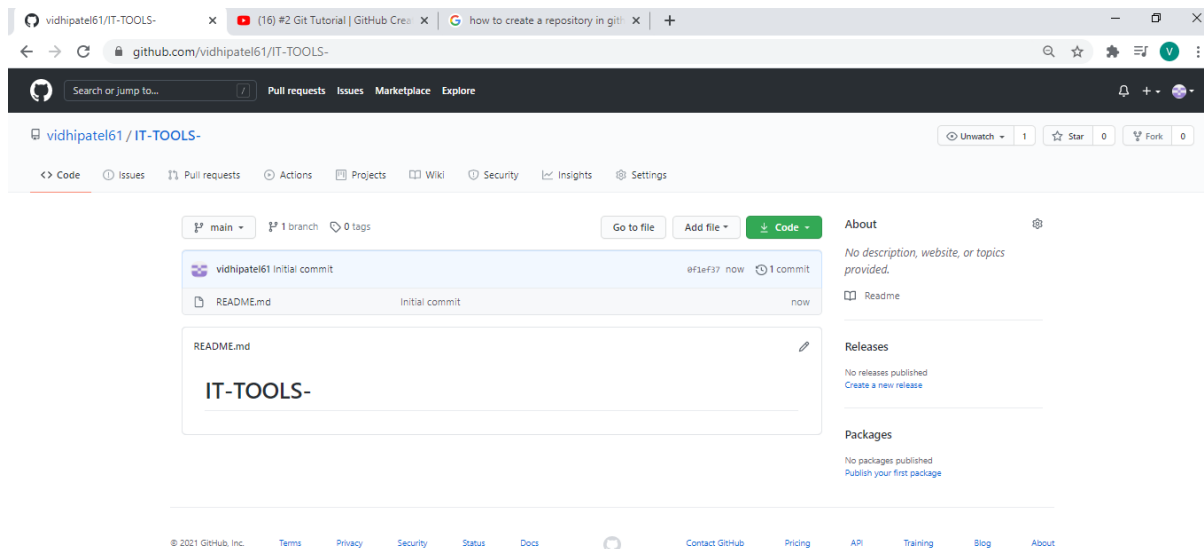

Step 4: After clicking on Create repository button you will visit this page and you have to give some details like repository name, the description about your repository click on the private or public button.

1) **Private:** If you want no one can access your repository then click on private button.

2) **Public:** If you want other people can access your repository then click on public button.

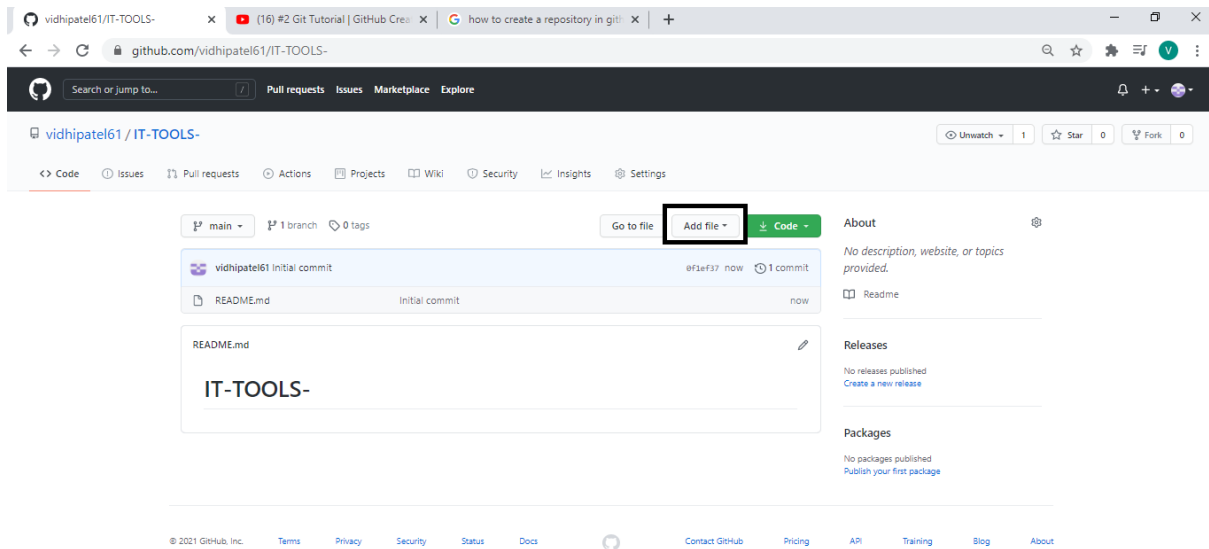

Step 5: On the last click of Create Repository you will visit this page

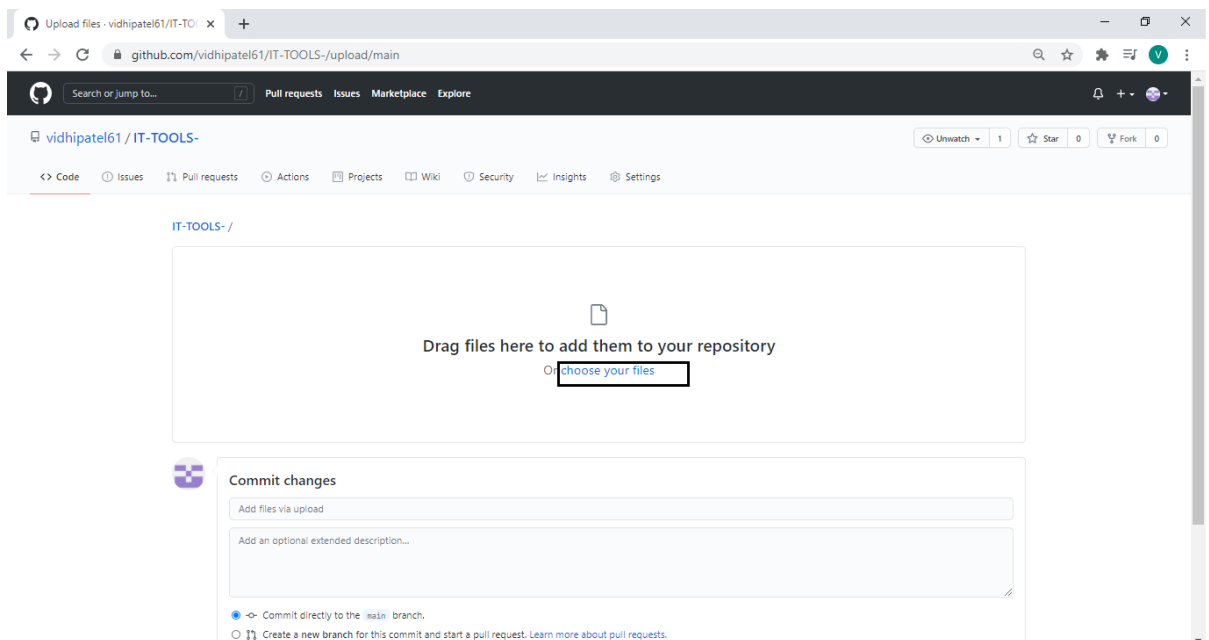

c) Cloning repository

Step 1: To Clone Repository click on the **Add File** .

Step 2: You will visit this page and then click on **“Choose your files”** and choose the file which you want to upload in your Repository.

Step 3: Select the file which you want and click on open button and at last click on the commit changes button to save the changes.
